| Date | 13 November 2022 |
| Team ID | PNT2022TMID14081 |
| Project Name | Real – time River Water Quality Monitoring and Control System |
| Maximum Marks | 4 Marks |

You can publish your virtual data to catalogs in Watson™ Knowledge Catalog. An administrator can configure Data Virtualization to automatically publish all virtual objects that are created in the user interface to a configured primary catalog.

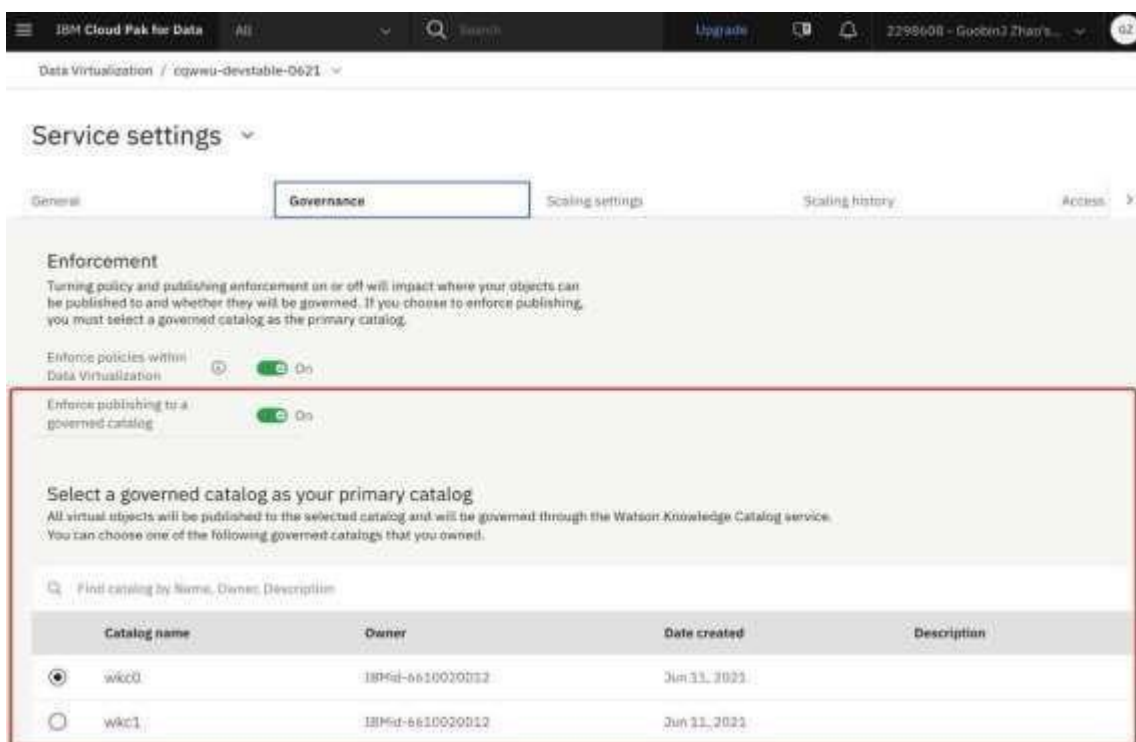

By publishing your virtual data to a catalog, you can:

*Organize, label, classify, and search for the published data assets with global search. *Govern the virtual data asset and subject it to data protection rules by [enabling policy enforcement](#) in Data

*Navigate to **Service settings**.

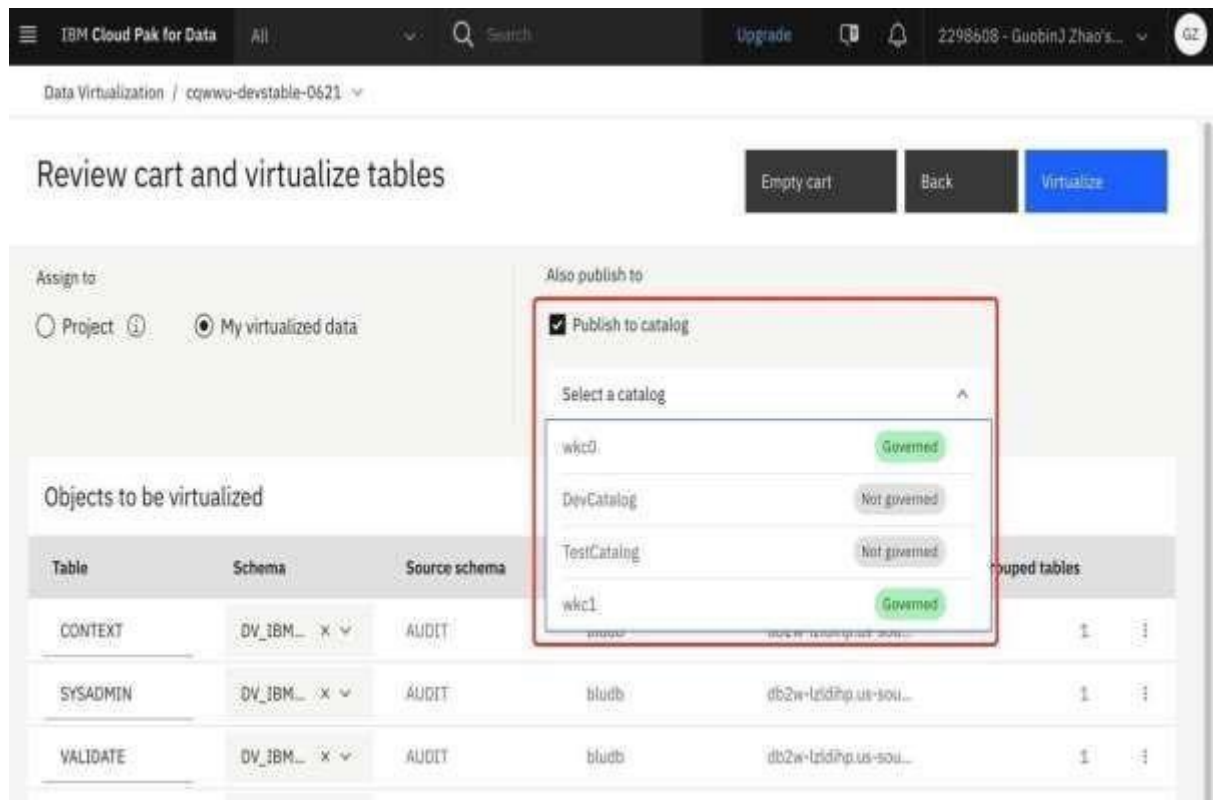

*On the **Governance** tab, enable the **Enforce publishing to a governed catalog** option.

A list of governed catalogs that you have Admin access to is shown. You must select a governed catalog as your primary catalog. When you set a primary catalog, all

virtualized objects are published to this catalog automatically. The **Publish to catalog** option is disabled when you review your cart and virtualize tables.

1. On the service menu, click **Virtualization** > **Virtualized data**.
2. Select the virtual objects that you want to publish and click **Publish to catalog**.

3. Continue with the virtualization process
